

WHY ARE WAHL CLIPPER BLADES THE BEST AVAILABLE

There are sharp differences between Wahl Clipper blades and competitive blades. Below is a technical comparison of the most popular blade styles in the marketplace. Optimal cutting performance depends on cutting speed, motor power and blade set-up all working together. A proper blade assembly requires sharp, oiled blades that are correctly aligned, tensioned and tuned for correct stroke.

Quality Guaranteed

Over 95 years of experience and a commitment to quality that's reflected in superior materials and cutting edge technology makes Wahl Clipper blades a cut above the rest. Innovation has been a hallmark of Wahl since 1919. That was the year we invented the electric hair clipper. Today, that same cutting-edge technology goes into every item made.

MATERIAL

Wahl blades are manufactured with exclusive custom blend of high carbon steel. They are precision-ground, fire-hardened blades for maximum efficiency and long-lasting sharpness. The chromium steel top blade resists corrosion, assuring years of smooth operation. The high-carbon steel bottom blade features microscopic pores that actually release oil during operation for light self lubrication. Both top and bottom blades are guaranteed never to crack or break under normal use.

DESIGN

Wahl's unique design with precise tolerances of blade geometry and tension between blades is crucial to achieving superior cutting performance

MANUFACTURING

The proprietary Wahl manufacturing process is highly automated and incorporates years of experience and knowledge to consistently produce the finest blades

Wahl uses only precision-ground, fire-hardened blades for maximum efficiency and long-lasting sharpness.
